

Working with the Copy Option in Farm Site and Site Pro

Copy from line layer to line layer

With the layer you wish to copy from as the top Displayed Layer:

1. Right click on the line you want to copy and choose copy.
2. Double left click the other layer you wish to copy to, placing it as the top displayed layer.
3. Select the edit layer button.
4. Right click on the map and choose paste.
5. Select save and close editing.

Copy from line layer to polygon layer to create cut

With the layer you wish to copy from as the top Displayed Layer:

1. Right click on the line you want to copy and choose copy.
2. Double left click the other layer you wish to copy to, placing it as the top displayed layer.
3. Select the edit layer button.
4. Right click on the map and select “paste cut”.
5. Save and close editing.

Copy from polygon layer to polygon layer

When copying from one polygon layer to another polygon layer you have the option to either “paste addition” or “paste cut”. With the layer you wish to copy from as the top Displayed Layer:

1. Right click on the area you want to copy and choose copy.
2. Double left click the other layer you wish to copy to, placing it as the top displayed layer.
3. Select the edit layer button.
4. Right click on the map and select “paste addition”, this will add the copied polygon to the layer as a separate polygon.
5. You may then merge the polygons by holding the shift key and selecting each polygon then right click and select “merge polygons”.
6. You may also select “paste cut” instead of “paste addition”. This will create split lines in the active layer.
7. Save and close editing.
