

Merging Yield Maps

After importing yield data or application maps you may have multiple field records that you would like to merge into one job. To accomplish this follow these steps.

1. In the Tree View on the left hand side, locate the farm and field these jobs were recorded for. Select the correct crop enterprise
2. Place a check mark in the Filter Jobs by Selection in the upper right hand corner of the Farming Box.

3. The list of jobs will display on the Jobs Tab. The jobs displayed will be those for the selected crop enterprise.
4. Within the Jobs Tab highlight each job, by holding down the CTRL key and left click on each job to be merged.
5. Select the Merge button at the bottom of the Jobs Tab. You can also right click on the highlighted jobs and select Merge.
