

Working With XML Files

Version 2008 gives Farm Works user the option to export and import multiple jobs using XML Files.

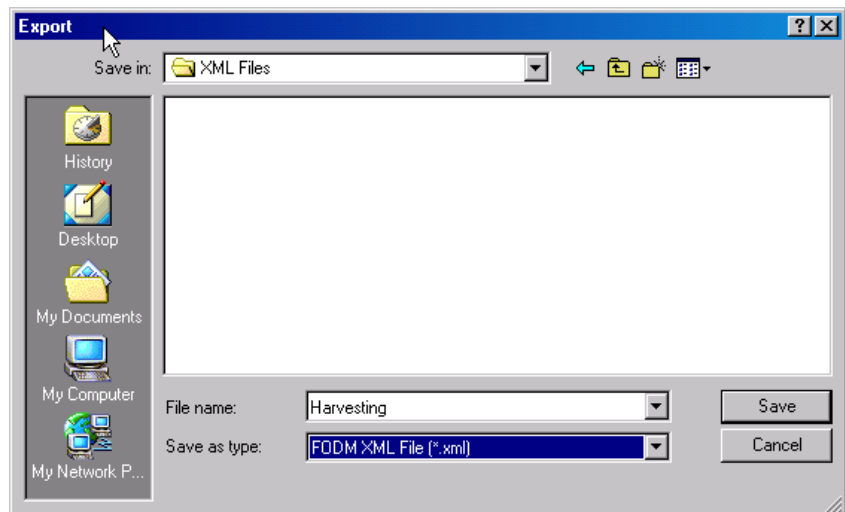

Exporting XML Files:

- 1) Highlight the job(s) on the Job Tab. To select more than one job, hold down the CTRL key (or Shift to select a group) and left click on each individual job.

- 2) Once the jobs are highlighted, right click on one of the selected jobs and select the option for Export.

- 3) On the Export screen select a Save In location and then enter in a file name in the File Name box at the bottom of the screen. Make sure the file type is set to FODM XML File and select Save.

- 4) The program will then bring up an Export XML process screen. This may take a few minutes depending on how many you are exporting.

Importing XML Files.

- 1) To import XML files, within Farm Works select the File Menu and then select Read Job Data
- 2) Click on the plus sign next to Generic Import, and then select the option for FODM XML.
- 3) Browse for the location where the XML files are stored. Double click on one of the files listed. Once you double click it will take you back to the Read Job Data screen.
- 4) All XML files within the selected location will be listed and highlighted in a gray color. Select OK to bring them all in or select specific files then click OK.
- 5) The program will then bring up an Export XML process screen. This may take a few minutes depending on how many you are importing.
- 6) The imported job(s) will now be listed as a job(s) on the Jobs Tab with the associated Farm/Fields.
